

High-Flow Oxygen Therapy basics

High-Flow Oxygen Therapy delivers an accurate FiO_2 range, while preserving moisture and temperature conditions of the lung similar to spontaneous breathing.

Why use High-Flow Oxygen Therapy?

FLORALI study

shows High-Flow Oxygen Therapy may reduce mortality rate for patients with non hypercapnic and hypoxemic acute respiratory failure.

High-Flow Oxygen Therapy function is available on Monnal T75 and T60 ventilators.

Unique Device for all your ventilation therapies

- Integrated solution for space optimisation
- Safe and quick shift between NIV and HFOT session
- Simplifies staff training and focus on patient
- Unique device for reduced care cost
